## **DETAILED ACTION**

## Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C.
 121:

- I. Claims 1-6, drawn to an electric motor armature, classified in class310, subclass 71.
- II. Claim 7, drawn to a process of producing an electric motor armature, classified in class 29, subclass 596.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case invention II does not require the use of a circuit cap with connecting pin mates. It is also not necessary for a motor as disclosed in invention II to have a PCB since such part is not require in all motors. The process disclosed in invention II may be used for other type of motors other than the one disclosed in invention I, such as motors not requiring the use of electronic circuits or PCB.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper and because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
